

mesoestetic®
chemical peel

PRE & POST CARE GUIDE

PRE-TREATMENT

- Limit prolonged sun exposure & UVA rays during the treatment cycle.
- 1 to 2 days before treatment: Do not color, bleach, shave or depilate the treatment area(s).
- Do not perform dermabrasion or ultrasound peels.
- A prior superficial peel to prep skin is advisable.
- AVOID procedures that may disturb the dermis-epidermis (radiofrequency, diathermy, facial cleansing, etc).
- We advise you to wait at least:
 - 7 days after implating fillers
 - 30 days after having a tattoo
 - Minimum of 3 months after treatments with fractionated laser, CO2, erbium laser, etc.

POST-TREATMENT

- Avoid swimming pools, saunas, exposure to light & sources of direct heat for up to 48 hours post treatment.
- Peeling, scaling, tightness, mild redness, dry & flaking skin may result after this treatment. It is normal for skin to appear red & flake.
- Consult your clinician prior using any retinoids.
- Avoid depilation with wax, electricity or photodepilation for 30 days after treatment with mesopeel 35% and up to 15 days in other cases.
